JavaScript Fundamentals

Lab6

Implement wait5sec method.

BOM

1. Window Object

1.1. Create a parent window that opens a flying child window. Hint: Start by creating a parent window that opens a child window.

Child window should always be on top view and moves up and down within boundaries of user screen.

Parent window should contain a button that stops child window movement.

1.2. Create a parent a window that opens a scrollable advertising child window.

1.3 Write a script that shows a “typing message” appearing in a new child window. The new window should close after few seconds of displaying your message.

2. Location Object & Navigator Object

2.1. Make your own welcoming page of a registration form to

- display a greeting message for the user by his name and title, then
- show a display of his info (address, gender, email, mobile) and
- display a recommendation to use chrome browser if he is using another browser (**Bonus**)

Hints:

- You should build a registration form to send the entire required info from the user and let the action is getting the welcoming page.
i.e. The welcoming page is the page that should be displayed after registration.
- The registration form should contain fields for name, email, password, job title, mobile, gender, and address.
- Read the required info from the query string.
